

OH Learning Module W507 Health Effects of Hazardous Substances

Internationally Recognised Qualification

Topics Covered:

- Basic Principles of Toxicology
- Physiology and target organs
- Routes of exposure
- Workplace toxic effects
- Epidemiology basics

On completing this course successfully, you should be able to:

- Provide definitions of commonly used toxicological terms;
- Describe the main routes by which hazardous substances can enter the body, and the factors which influence their absorption, distribution, storage and elimination;
- Describe the main sources of information on hazardous substances and processes;
- Describe the main features of the principal target organs affected by hazardous substances at work, and the factors which influence the degree of harm;
- Describe the main routes of exposure and toxic and health effects for hazardous substances commonly encountered in the workplace;
- Carry out basic interpretation of the results from epidemiological studies.

Presented by NZOHS including internationally certified occupational hygienists.

Auckland, 11th – 15th March 2019

at Best Western Ellerslie International
2 Wilkinson Road, Ellerslie, Auckland 1060
